

Metalphoto® Case Study: Lasting Donor Recognition

Award-winning Mariemont School Foundation chose Metalphoto photosensitive anodized aluminum for permanent images to last a lifetime.

To create photo images with sharp black graphics and superior durability, White Design Studio turned to Metalphoto.

Located just outside Cincinnati, Ohio, the Mariemont School Foundation is a non-profit organization of parents, residents and alumni working to sustain excellence within the award-winning Mariemont School District.

In 2012, the foundation set out to create an outdoor structure that would recognize the district's generous supporters, display the faces of local students and faculty, and inspire others in the community to give.

Cincinnati design firm White Design Studio was charged with creating a unique, eye-catching display that is able to make an emotional connection with passersby.

More Than a Sign

The installation that White Design Studio created transcends typical signage to become a true work of art. Interlocking hexagonal tiles — inspired by Mariemont schools' hexagonal architecture — fit puzzle-like on a large outdoor wall in hues of brown, yellow and blue. The wall is trimmed above by a metallic trellis and sited

prominently at a bustling Mariemont bus stop.

Each tile commemorates a donor or displays a photograph of students. To create photo tiles with sharp black graphics and superior durability, White Design Studio turned to Metalphoto.

“The panels needed to be permanent, durable and crisp,” says Thomas Dangerfield, a designer for White Design Studio. “Metalphoto gave us great-looking photos in a very durable product.”

Outdoor Photos That Endure

Metalphoto anodized aluminum is the only material that could give White Design Studio the photo resolution they wanted with the durability they needed for this project.

Sealed under Metalphoto’s sapphire-hard

anodic layer, these tiles will maintain their original appearance for more than 20 years, even with exposure to heat, humidity, sunlight and abrasion.

In fact, the National Association of Graphic and Product Identification Manufacturers (GPI) Industry Standards and Practices Manual identifies Metalphoto photosensitive anodized aluminum as the most durable printed aluminum substrate available, citing its applicability for extreme environmental conditions and outdoor exposure.

Given its location on a busy city street, the donor recognition wall also benefits from another Metalphoto characteristic — it is inherently graffiti-resistant.

Precision Fabrication

To achieve the puzzle-like pattern, White Design Studio needed every tile to meet

exacting measurements. Each tile is 5" x 3" and lines up precisely with a matching hexagonal grid on the wall.

"Metalphoto of Cincinnati [a leading Metalphoto processor] produced the Metalphoto and cut them to the exact shape we needed," says Dangerfield. "Every time we have to get involved in the production process it costs our client money. MPC was able to produce exactly what we asked for."

Additionally, Metalphoto's high-contrast black-on-silver graphics capability also

helped White Design Studio create true photographic images with no compromise in resolution.

"This application was unique because it was outdoor. That made Metalphoto the ideal choice for this application," says Dangerfield. "If we did any outdoor projects again, we would absolutely use Metalphoto."

About Metalphoto:

For over 50 years, industrial and military engineers have specified Metalphoto photosensitive anodized aluminum in applications where permanent product identification is critical. Metalphoto's proprietary technology permanently seals a UV-stable image inside of anodized aluminum, offering the confidence of unparalleled durability, image resolution and readability. Metalphoto is used for component labels, machine nameplates, barcode labels, operator control panels, maintenance schematics, architectural signage and many more
